

## On the Subject of Setup Wizard

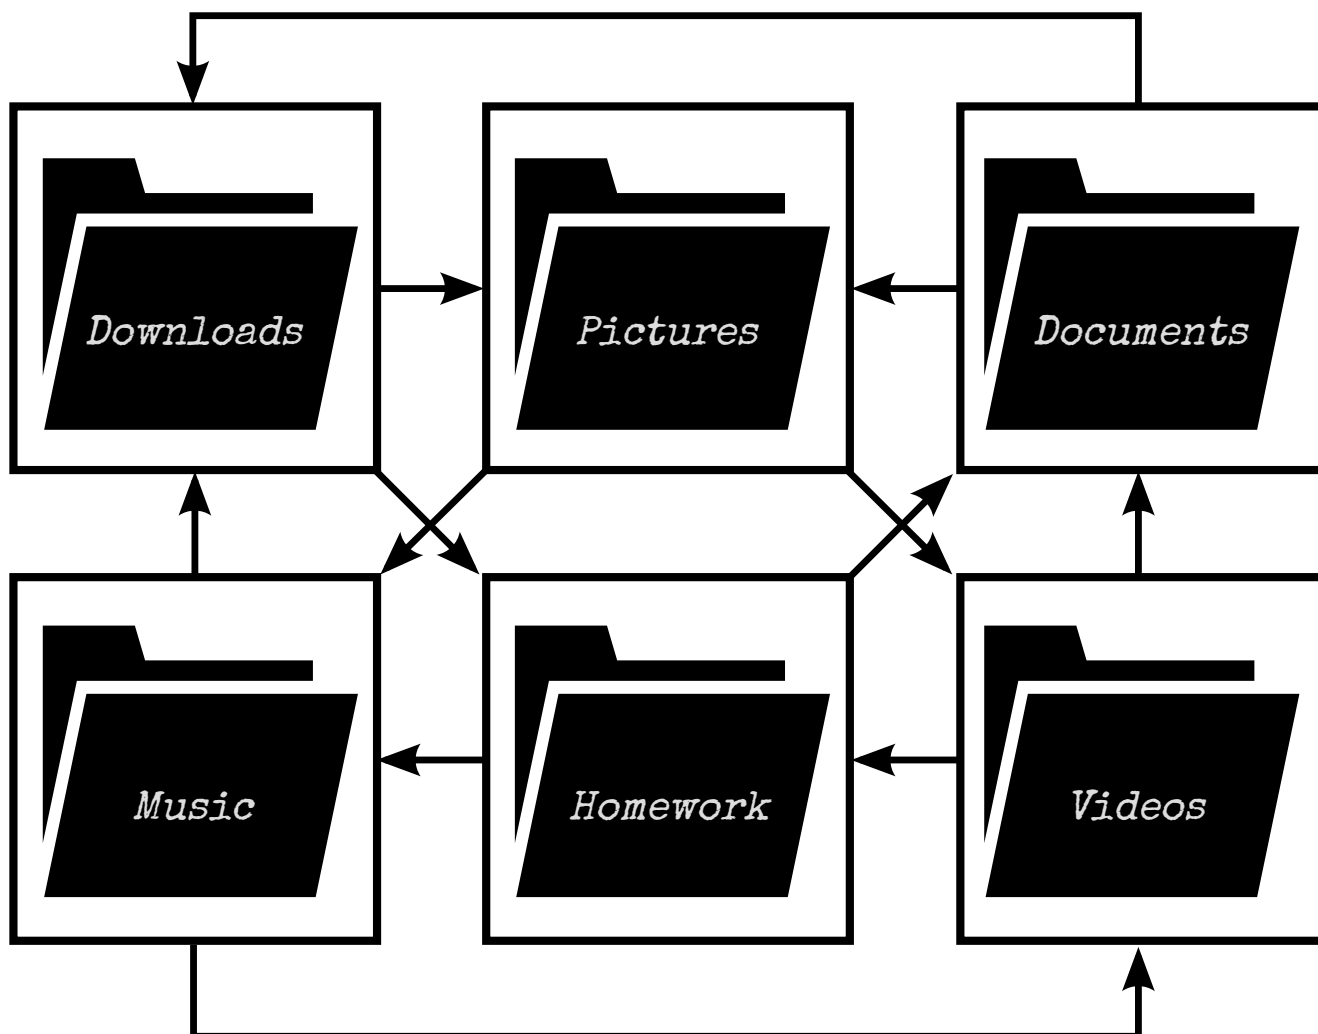

*Warning: Installing unknown applications can put your bomb at risk of malware and your body at risk of exploding.*

- Before you can start disarming this module, we need you to complete some preliminary steps to finish the installation process.
- You can press “Next” button to advance to the next page, or you can press the X in the top-right to close the setup wizard and reset the module to its original state.
- To finish installing the module, determine what your account information is and submit it on the third page.

### Page 1: Download Location

This page determines your username, which consists of two words. On this page is a file directory with two folders. You start in a random folder, you cannot see the name of the folder you are currently in, and you can click on a folder to enter it. A map of the directory is shown below.

However, two of these folders have their names swapped. Use the swapped folders, your starting folder, and the following lookup tables to determine your username:

- If the first letter of the serial number is a letter in “SETUPWIZARD”, use the first swapped folder in alphabetical order with Table A and the second swapped folder in alphabetical order with Table B.
- Otherwise, use the second swapped folder in alphabetical order with Table A and the first swapped folder in alphabetical order with Table B.
- If the last letter of the serial number is a letter in “COMPUTERLAB”, use the swapped folders for the rows and the starting folder for the columns.
- Otherwise, use the swapped folders for the columns and the starting folder for the rows.

**Table A**

	Downloads	Pictures	Documents	Music	Homework	Videos
Downloads	Moist	Awesome	Random	Mega	Lord	Scary
Pictures	Rainbow	Based	Colonel	Crazy	Red	Powerful
Documents	Tainted	Not	Doctor	Funky	Holy	Creepy
Music	Cringe	Unhinged	Epic	Creamy	Mister	Sloppy
Homework	Cool	Wacky	Super	King	Grunkle	French
Videos	Secret	Broken	Robo	Average	Itz	Funny

**Table B**

	Downloads	Pictures	Documents	Music	Homework	Videos
Downloads	Cake	Potato	Balls	Killer	Meister	Thing
Pictures	Bomb	Orb	Agony	Blan	Ish	Cucumber
Documents	Dude	Master	Disease	Gamer	Kitten	Foot
Music	Birthday	Salad	Expert	Finger	Troll	Guy
Homework	Licker	Mommy	Username	Death	Dongle	Hole
Videos	Monkey	Mate	Pie	Tapeworm	Berg	Spork

Your username is the word from Table A followed by the word from Table B, with no space in between.

## **Page 2: Terms and Conditions**

This page determines your password, which is a six-digit number. On the module, the password's digits will be referred to as A-F respectively.

The terms and conditions page has a list of equations that limit your password to one possible number. Possible operations include:

1.  $X + Y = \#$  (addition)
2.  $X - Y = \#$  (subtration)
3.  $X * Y = \#$  (multiplication)
4.  $X / Y = \#$  (division)
5.  $X || Y = \#$  (concatenation)

However, two of the numbers after the “=” have been swapped. When you solve the system of equations and find your six-digit password, take note of the swapped numbers. The greatest swapped number is X, and the lowest is Y. Take the last digit of the serial number, modulo 5 plus 1, and use the corresponding operation from the list above on X and Y. Shift the digits in your password Z spaces to the right, where Z is the result, rounded down. This is your final password.

## **Page 3: Account Info**

This page has spaces to enter your username and password. Type them in with the keyboard on the module and press “Finish” to submit. Entering an incorrect username or password will cause the module to administer a strike, but it will not reset.

When the module is installed, a large green button will appear on the module. Press this button to disarm the module.
